DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Drawings

2. Figure 3 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Information Disclosure Statement

3. The listing of references in the specification is not a proper information disclosure statement. 37 CFR 1.98(b) requires a list of all patents, publications, or other information submitted for consideration by the Office, and MPEP § 609 A(1) states, "the list may not be incorporated into the specification but must be submitted in a separate paper." Therefore, unless the references have been cited by the examiner on form PTO-892, they have not been considered.

The reference to Steyaert et al, " Analog Integrated Polyphase Filters, in: Analog circuit Design" is not part of the I.D.S. submitted, please submit and make of record on another I.D.S. for examiner to review.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 2817

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1,2, and 5 are rejected under 35 U.S.C. 102(b) as being anticipated by Bijker et al(US 5,404,589).

The reference by Bijker et al discloses a device for demodulating an FM signal(see figure 1), and col. 6, lines 8-50, mixers(M2i,M2q) for converting the FM signal into orthogonal components(I, first component; Q, 2nd component); a polyphase filter(RA1,RA2) with inputs receiving the first and second components and outputting a first output signal(VI) and a second output signal(VQ). An additional mixer(M32) for receiving the first component(I), and the second output signal(VQ). The other mixer M31 receives the second component(Q) and the first output signal(VI). As noted in col. 4, the filter(RA1,RA2) have symmetrical bandpass characteristics about F_{res} (i.e. I.F. frequency). The method steps of claim 5 being inherent to the structure as noted above.

Allowable Subject Matter

6. Claims 3 and 4 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The examiner could not find fair suggestion for the particular polyphase filters in the FM demodulator for receiving the I.F. quadrature components.
